International capital is now mainstreaming environmental considerations from both risk and opportunity perspectives:

- •Capital markets worldwide worth USD47 Trillion. Pensions funds hold 25% of these markets. Institutional investors recognize they have to consider a broader range of environmental, social, governance and human rights (E,S, G&HR) risks.
- •<u>Principles for Responsible Investment:</u> Backed by more than 4 trillion USD assets under management; Launched by Kofi Annan on 27 April 2006
- •Today HSBC Group signs PRI. HSBC's investment arm holds USD 470 billion which they are committing across their mainstream portfolios in all asset classess to back ESG action.

International capital is now mainstreaming environmental considerations from both risk and opportunity perspectives:

- •Equator Principles sees nearly 40 banks representing more than 80% of global project finance volume integrating environmental and other qualitative issues into the fabric of project lending criteria.
- •By 2020 global renewable energy, climate change and cleantech markets predicted to offer USD 2 Trillion plus markets.
- •Access to favourably priced international capital will depend on lenders ability to integrate and demonstrate sound management of ESG&HR issues.
